

IrisAccess™ 4000

the iris recognition system that's generations ahead of the rest

The LG IrisAccess™ 4000 series is the solution. This state-of-the-art access control unit is the world's leading deployed iris recognition platform. It has features no other iris system offers. All models in the 4000 series feature the robust LG counter-measures package that experts concede sets the standard for the industry.

Two Eye-Authentication

IrisAccess™ 4000 quickly acquires digital images of both irises. A variety of authentication configurations can be selected.

Two Factor Authentication

The system can easily cater for swipe card access as well as an iris scanner.

Multi-Factor Authentication

A third tier authentication option allows key pad authentication in addition to the swipe card and iris scanner.

Face Image Camera

All IrisAccess™ 4000 series cameras come with a face camera and purpose built illuminators that facilitate credentialing as part of the enrolment process.

Network Connectivity

With each unit IP-addressable, IrisAccess™ 4000 is ideal for the very largest enterprise-scale network deployment and comes with a variety of standard connectivity options.
